STAYING POWER: FUNCTIONAL LONGEVITY RESEARCH EPD

ARTICLE BY: KELLI RETALLICK
PRESIDENT, ANGUS GENETICS INC.

Cow herds across the nation define the optimal maternal female in a variety of ways based on resources, management, and environment. However, most breeders and commercial cattlemen can agree that a female who produces a calf every year over her lifetime is one we would all like to have in our herds. Recently, the American Angus Association released a research tool to select for just that.

The functional longevity (FL) research Expected Progeny Difference (EPD) predicts the number of calves a sire's daughter is expected to produce on average by six years of age compared to other sires' daughters in the population.

The FL research EPD counts the number of calves a female produces from 2-10 years of age, while considering when and why the females leave the herd early. Using this data, the current heritability estimate of the trait is 0.09 at 6 years of age.

FL Research EPD Overview:

- Higher FL research EPD = More desirable.
- Unit of EPD = Predicted number of calves at year six.
- Research EPD = Traits in a research form are not updated on a weekly basis and are still being evaluated prior to a production release.

PRACTICAL APPLICATION

When studying the FL research EPDs, higher EPDs are better as they predict that future female progeny will have the genetic ability to produce more calves by six years of age. If your breeding goal is to increase the number of calves produced, the sire with a higher EPD is more desirable compared to a sire with a lower EPD. For instance, in Table 1, Sire A has a research EPD of 1.5 while Sire B has a research EPD of 1.0. This means that sire A's daughters are predicted to produce 1 more calf by age 6 compared to Sire B's daughters.

	FL EPD
Sire A	1.5
Sire B	0.5
Difference	1.0

While the current FL research evaluation is a good tool to help Angus breeders, and users of Angus genetics, start to understand how sires rank for this important trait, **data recording and participation in Inventory Reporting through the Angus Herd Improvement Records (AHIR) program are of utmost importance to allow further refinement of the trait.** One of the key points to remember is: **Genetic improvement for this trait is not about the individual female, but rather the aggregate information provided by sires' daughters.** One female that has a calf every year until 10 years of age will not be able to accelerate the rate of genetic change of the population by herself; however, **if hundreds of her sisters are reporting the same result using that sire or those sire lines, over time, it will lead to positive genetic change in the Angus breed.**

Functional longevity will stay in the research EPD format for the foreseeable future allowing the Inventory Reporting data to continue to mature. Better data collection will allow for more accurate FL research EPDs. **For more information, please contact the American Angus Association's Performance Programs department at (816) 383-5100.**

SUPERIOR

Every collection required to pass rigorous pre-freeze and post-thaw quality evaluation, or the semen is discarded.

RELIABLE

Minimum requirement of 500 inseminations and pregnancy checks performed by 60 days post insemination.

COMPETITIVE

Internal evaluation system created by our partnerships with elite herds compares conception rates across the industry.

ELITE

Highly recommended sires for Fixed Time AI protocols, embryo production, and Sexed semen superiority.

DELAYED BLINDNESS (DB)

AN IMPORTANT MESSAGE FROM THE AMERICAN HEREFORD ASSOCIATION (AHA)

NOVEMBER 21, 2023

The American Hereford Association (AHA), in collaboration with Dr. David Steffen and Dr. Jessica Petersen at the University of Nebraska-Lincoln (UNL), have discovered a novel defect in Hereford cattle called Delayed Blindness (DB). This genetic defect is considered autosomal recessive, meaning an affected calf must have two carrier parents.

The AHA has received information from members over the last few years about cattle that appeared to be blind. Per AHA rules these cases were referred to Dr. Steffen at UNL for diagnosis. In each case, the animal had no apparent deficit in vision as a calf, with indications of vision loss being noted at approximately 9-12 months of age. In a novel setting, the cattle had difficulty navigating their surroundings and would bump into stationary objects. An in-depth ophthalmologic evaluation of suspected to be blind confirmed retinal degeneration, lack of a menace responsive (reaction to something being moved toward the eye), and little to no response to light stimuli as determined by an electroretinogram (ERG). The clinical evaluations confirmed blindness in each case.

Blind animals were reported in several different herds across multiple regions of the U.S. Pedigree records demonstrated a common sire in the pedigree of both the sire and dam of each affected animal, suggesting a new deleterious recessive genetic variant might be to blame for blindness in these cattle.

Importantly, this condition is not associated with the amount of pigment around the eyes; the appearance of the eyes is normal (they do not become cloudy or white). Researchers believe that the blind animals are at a greater risk of injuring their eyes due to difficulty navigating their environment. Carriers of the mutation appear to be healthy.

AHA and the UNL worked with Neogen® to develop a commercially available test so breeders can submit DNA for testing or test previously submitted samples on file at the AHA.

Fortunately, with new technology and advancements, breeders can work around this defect to continue to breed carrier animals if they choose, as opposed to culling affected genetic lines.

Sincerely,

Jack Ward
Executive Vice President
American Hereford Association

Shane Bedwell
COO and Director of Breed Improvement
American Hereford Association

A premier index designed to increase profitability and sustainability by reducing feed costs and decreasing the carbon footprint of cattle.

The greatest potential for improving profitability and environmental sustainability is to select animals that produce the same amount of milk or meat on less feed.

Ecofeed® enables producers to positively impact an animal's carbon footprint prior to birth and reduce the input cost of beef production.

Ecofeed®

A WINNING SOLUTION FOR PRODUCERS & CONSUMERS!

ORDER. SHIP. RECEIVE.

INTERESTED IN SAVING MORE?

Purchase **\$500 - \$999** of semen → Receive **50% OFF** shipping

Purchase **\$1,000 or more** of semen → Receive **FREE SHIPPING**

**Exclusions may apply - Offer does not include rush delivery fees.*

The box shipper tank was designed by innovative professionals at STgenetics® and sets the new standard for shipping semen.

Our shipper tanks are lightweight, reduce shipping costs, and are built for efficiency allowing STgenetics® to offer the most competitive shipping rates in the industry.

SEXED SEMEN

Protocols

HEAT DETECTION

Sexed semen can be used on any female observed in estrus (heat) and following synchronization with any protocol. For best results with sexed semen, perform AI 18 to 22 hours after detecting females in estrus. Use of estrus detection aids (EDA) is highly recommended.

SPLIT-TIME AI (STAI)

Perform first TAI 66 ± 2 hrs after PG in estrous females. GnRH administered at second TAI only in non-estrous females. Females detected in estrus by first or second AI receive sexed semen. Females not in estrus receive conventional semen at second TAI.

Heifers only

14-day CIDR®-PG & STAI

Cows and/or Heifers

7-day CO-Synch + CIDR® & STAI

FIXED-TIME AI (FTAI)*

To optimize pregnancy success, it is recommended to use sexed semen on females that have exhibited estrus before FTAI and conventional semen on females that have not exhibited estrus.

Heifers only

7-day CO-Synch + CIDR®

Perform TAI at 72 hrs after PG with GnRH at TAI.

Cows only

7-day CO-Synch + CIDR®

Perform TAI at 60 to 66 hrs after PG with GnRH at TAI.

Heifers only

PG-7 7-day CO-Synch + CIDR®

Perform TAI 72 ± 2 hrs after second PG with GnRH at TAI. Heifers in estrus receive Sexed semen, heifers not in estrus by TAI receive Conventional semen

These protocol sheets were assembled by the **Beef Reproduction Task Force; BeefRepro.org**. Programs are intended to promote sustainable food production systems by the beef industry through sound reproductive management practices for replacement heifers and postpartum cows. The Beef Reproduction Task Force recommends working with a licensed veterinarian for proper use and application of all reproductive hormones. **Approved 9-5-2023**

*The time listed for "Fixed-time AI" should be considered as the approximate average time of insemination. This should be based on the number of females to inseminate, labor, and facilities.

BEEF HEIFER Protocols

HEAT DETECT & TIME AI (TAI)

For best results perform AI 12 ± 2 hrs after detection of estrus. Use of estrus detection aids (EDA) is highly recommended.

These protocol sheets were assembled by the **Beef Reproduction Task Force; BeefRepro.org**. Programs are intended to promote sustainable food production systems by the beef industry through sound reproductive management practices for replacement heifers and postpartum cows. The Beef Reproduction Task Force recommends working with a licensed veterinarian for proper use and application of all reproductive hormones. **Approved 9-5-2023**

FIXED-TIME AI (FTAI)

The time listed for Fixed-time AI should be considered as the approximate average time of insemination based on the number of heifers to inseminate, labor, and facilities.

MGA®-PG

Perform TAI at 72 ± 2 hrs after PG with GnRH at TAI.

Select Synch + CIDR® & TAI

Heat detect and AI days 7 to 10 and TAI all non-responders 72-84 hrs after PG with GnRH at TAI.

7-day CO-Synch+CIDR® & Split-TAI

Perform first TAI 54 ± 2 hrs after PG in estrus heifers. Second TAI with GnRH only in non-estrous heifers.

5-day CO-Synch + CIDR®

Perform TAI at 60 ± 4 hrs after CIDR removal with GnRH at TAI. Two injections of PG 8 ± 2 hrs apart are required for this protocol.

MGA®-PG & TAI

Heat detect and AI days 33 to 36 and TAI all non-responders 72-84 hrs after PG with GnRH at TAI.

14-day CIDR®-PG & TAI

Heat detect and AI days 30 to 33 and TAI all non-responders 72 +/- 2 hrs after PG with GnRH at TAI.

7-day CO-Synch + CIDR®

Perform TAI at 54 ± 2 hrs after PG with GnRH at TAI.

14-day CIDR®-PG

Perform TAI at 66 ± 2 hrs after PG with GnRH at TAI.

7&7 Synch

Perform TAI with GnRH at 54 ± 2 hrs after CIDR removal

BEEF COW *Protocols*

HEAT DETECT & TIME AI (TAI)

For best results perform AI 12 ± 2 hrs after detection of estrus. Use of estrus detection aids (EDA) is highly recommended.

Select Synch & TAI

Heat detect and AI days 6 to 10 and TAI all non-responders 72-84 hrs after PG with GnRH at TAI.

PG 6-day CIDR® & TAI

Heat detect & AI days 0 to 3. Administer CIDR to non-responders & heat detect and AI days 9 to 12. TAI non-responders 72-84 hrs after CIDR removal with GnRH at AI. Protocol may be used in heifers.

Select Synch + CIDR® & TAI

Heat detect and AI days 7 to 10 and TAI all non-responders 72-84 hrs after PG with GnRH at TAI.

7-day CO-Synch+CIDR® & Split-TAI

Perform first TAI 66 ± 2 hrs after PG in estrus cows. Second TAI with GnRH only in non-estrous cows

FIXED-TIME AI (FTAI)

The time listed for Fixed-time AI should be considered as the approximate average time of insemination based on the number of females to inseminate, labor, and facilities.

These protocol sheets were assembled by the **Beef Reproduction Task Force**; **BeefRepro.org**. Programs are intended to promote sustainable food production systems by the beef industry through sound reproductive management practices for replacement heifers and postpartum cows. The Beef Reproduction Task Force recommends working with a licensed veterinarian for proper use and application of all reproductive hormones.
Approved 9-5-2023

7-day CO-Synch + CIDR®

Perform TAI at 60 to 66 hrs after PG with GnRH at TAI.

5-day CO-Synch + CIDR®

Perform TAI at 72 ± 2 hrs after CIDR removal with GnRH at TAI. Two injections of PG 8 ± 2 hrs apart are required for this protocol.

7&7 Synch

Perform TAI with GnRH at 66 ± 2 hrs after CIDR removal

Bos Indicus PG 5-day + CIDR®

Perform TAI at 66 ± 2 hrs after CIDR removal with GnRH at TAI.
